

## PRESS RELEASE

---

### *Certified Aviation Services unveils new web site design*

Ontario, California April 2008 – Certified Aviation Services has launched a newly designed website at [www.CertifiedAviation.com](http://www.CertifiedAviation.com). The new site provides visitors with new improvements to navigation, look and feel and highlights CAS' new, maintenance-focused brand imagery.

The revamped home page features images of CAS mechanics at work and increased functionality allows visitors to immediately choose which areas of the site they wish to visit. Drop down menus and new page layouts offer customers an improved user experience. CAS has also added the ability to browse not only by services and company background, but also to click directly through to the industry specific areas including Commercial, General or Government Aviation.

“Time is always short in the aviation industry – so we set out to create a website that allows all our customers to quickly find the information they are looking for, and at the same time learn about and connect with Certified Aviation Services.” – Jennifer Shrum, Marketing Manager

Additional features and additions to the website include news and event notices, case studies, customer testimonials and employee spotlight articles. An improved customer feedback form will allow for CAS to more quickly respond to requests for quotes, information or customer support.

With 18 years of experience, CAS is a world-class provider of line maintenance and aircraft modification services for commercial, corporate and military aircraft. CAS distinguishes itself by providing its customers with innovative, cost-effective maintenance solutions when and where they need it. Currently, CAS has 16 locations throughout the United States and holds a full 145 repair station license, servicing virtually every aircraft in operation. CAS provides line maintenance services in ANC, DEN, ELP, IAH, LAS, LAX, LGA, LGB, ONT, ORD, PDX, PHX, SBD, SEA, SFO and SNA. For more information about CAS, visit the CAS website at [www.CertifiedAviation.com](http://www.CertifiedAviation.com).
